Overview In 2009, Autodesk's estimated revenue was \$2.02 billion, and it employed 7,000 people. Autodesk acquired a majority share in the graphics software company ThreeD (which produces CAD/CAM software), in August 2012, and it announced on November 14, 2012, that Autodesk is closing ThreeD's headquarters in Naperville, Illinois, by the end of 2012. Traditionally, AutoCAD required a single user operating the application to produce drawings, schematics, and other designs. Starting in AutoCAD 2016, however, multi-user, multi-platform, collaborative design is offered in both AutoCAD and Inventor. The software uses computer-generated representations of physical objects called "documents" to store and share design data. Documents are presented as two-dimensional drawings, which the user can annotate, manipulate, and save. A third-party program called AutoCAD 360 allows users to view documents, maps, and 3D models. The name "AutoCAD" is a registered trademark of Autodesk, Inc., registered in the U.S. and many other countries, used on the business version of AutoCAD. Updates While many aspects of AutoCAD, such as the software rendering engine, the Graphical User Interface, and the Object Linking and Embedding API (OLEDB), are functionally similar to those used in other CAD packages, as a new version of AutoCAD is released there are frequent bug fixes and new features, such as robust viewing of large drawings and many design improvements in the 2016 release. The product line also has various complementary products, such as AutoCAD 360, and for the AEC (architectural engineering) market, AutoCAD Mechanical. AutoCAD LE and AutoCAD LT are available for home users and small businesses. History Autodesk acquired RevolutionMetrics in late 2011, and that was followed in 2012 by a name change to Autodesk Enigma. Then, in November 2012, Autodesk announced that they were closing the company's headquarters in Naperville, Illinois, with all employees being laid off. Some former employees at Enigma were offered jobs at the Autodesk headquarters in San Rafael, California. In January 2013, Autodesk announced that they would be developing a new professional graphics software product. In November 2013, Autodesk revealed in an interview

The Visual Basic.NET Development Kit (VB.NET DLLs) are intended to be used with AutoCAD and allow development of applications that interact with AutoCAD on Windows platforms. The ObjectARX SDK allows the development of AutoCAD-based applications on the Microsoft Windows platform.

History Early developments Autodesk introduced AutoCAD in 1982 for Windows. The first version, AutoCAD for Windows, was initially bundled with versions of AutoCAD that included 3D-based capabilities. The first version of AutoCAD for Windows shipped with version 1.0 of the drafting standard, Drafting U.S.A. (DU.S.A.). The initial version of AutoCAD did not have any 3D modeling features. Autodesk's first iteration of AutoCAD used a user interface (UI) similar to those of other CAD packages of the time. Two basic views were provided; a 2D drawing window for the user to enter information (including dimensions and annotations) and a 3D view window. Many features were tied to these views, such as predefined layers. Soon after the release of AutoCAD for Windows, a 3D version was developed and introduced in 1987. When the first version of AutoCAD 3D for Windows shipped in 1987, it was capable of working with both DWG and DGN files. The main features included: Object linking (also known as chain loading) a1d647c40b
